Intro to Cryptology  
Hands on Exercise 12

#1

$$\begin{aligned} p &= 101 \\ q &= 113 \\ \phi(n) &= (p - 1)(q - 1) = 100(112) = 11200 \end{aligned}$$

$$\begin{aligned} e * d &= 1 \pmod{\phi(n)} \\ 7467 * d &= 1 \pmod{11200} \\ d &= 3 \end{aligned}$$

$$m = C^d \pmod{n} = 5859^3 \pmod{11413} = 1415$$

#2

$$\begin{aligned} P &= 5 \\ Q &= 11 \\ \phi(n) &= (p - 1)(q - 1) = 4(10) = 40 \end{aligned}$$

$$\begin{aligned} e * d &= 1 \pmod{\phi(n)} \\ 3 * d &= 1 \pmod{40} \\ d &= 27 \end{aligned}$$

#3

$$C = m^e \pmod{n}$$

$$\begin{aligned} C &= 8^3 \pmod{437} = 75 \\ C &= 9^3 \pmod{437} = 292 \end{aligned}$$

$$m = 8$$

#4

For  $e = 1$ ,  $C = m^e \pmod{n}$  would not change the plaintext since the value of  $m$  would not change.

For  $e = 2$ , we need  $\gcd(e, \phi(n)) = 1$  to find a private key.

If  $e = 2$ , then the  $\gcd(e, \phi(n)) = 2$  which means a key does not exist.

#5

$$\begin{aligned} A &= 1^{13} \% 8881 = 1 \\ B &= 2^{13} \% 8881 = 8192 \\ C &= 3^{13} \% 8881 = 4624 \\ D &= 4^{13} \% 8881 = 4028 \\ E &= 5^{13} \% 8881 = 794 \\ F &= 6^{13} \% 8881 = 2343 \\ G &= 7^{13} \% 8881 = 231 \\ H &= 8^{13} \% 8881 = 4461 \\ I &= 9^{13} \% 8881 = 4809 \end{aligned}$$

## Sheet1

J =  $10^{13} \% 8881 = 3556$   
K =  $11^{13} \% 8881 = 476$   
L =  $12^{13} \% 8881 = 2015$   
M =  $13^{13} \% 8881 = 513$
